Reading and Learning Andreas Dengel, Markus Junker, Anette Weisbecker, 2004-04-16 The amounts of information that are flooding people both at the workplace and in private life have increased dramatically in the past ten years. The number of paper documents doubles every four years, and the amount of information stored on all data carriers every six years. New knowledge, however, increases at a considerably lower rate. Possibilities for automatic content recognition in various media and for the processing of documents are therefore becoming more important every day. Especially in economic terms, the efficient handling of information, i.e., finding the right information at the right time, is an invaluable resource for any enterprise, but it is particularly important for small- and medium-sized enterprises. The market for document management systems, which in Europe had a volume of approximately 5 billion euros in 2000, will increase considerably over the next few years. The BMBF recognized this development at an early stage. As early as in 1995, it pooled national capabilities in this field in order to support research on the automatic processing of information within the framework of a large collaborative project (READ) involving both industrial companies and research centres. Evaluation of the results led to the conclusion that research work had been successful, and, in a second phase, funding was provided for the collaborative follow-up project Adaptive READ from 1999 to 2003. The completion of these two important long-term research projects has contributed substantially to improving the possibilities of content recognition and processing of handwritten, printed and electronic documents.

Chinese Global Exploration In The Pre-columbian Era: Evidence From An Ancient World Map Sheng-wei Wang, 2023-10-16 How early did the Chinese explore the world? Did the Treasure Fleets, led by Admiral Zheng He, discover many parts of the world before Christopher Columbus? While it is known that Christopher Columbus discovered America and Europe ushered in the Age of Discovery, there is an ongoing debate on the 'unknown' areas depicted in Western maps from

the period and earlier. There is agreement among scholars that certain areas seem to have been mapped out prior to the arrival of Western explorers. Chinese Global Exploration in the Pre-Columbian Era: Evidence from an Ancient World Map analyses the world's first modern map — known as Kunyu Wanguo Quantu (KWQ) 坤輿萬國全圖 in Chinese, translated as the 'Complete Geographical Map of All Kingdoms of the World' to demonstrate evidence of Chinese global exploration in the Pre-Columbian era. The map of concern was first printed by Italian missionary, Matteo Ricci in 1602, and has been purported to be of entirely European origin, based on Ricci's former maps which he had brought to China in 1582. This book, thus, seeks to be transformational in presenting essential new insights on Pre-Columbian world history and Chinese global exploration, moving away from the norm of the studies of geography and cartography by:

Writing Systems and Phonetics Alan Cruttenden, 2021-03-16 Writing Systems and Phonetics provides students with a critical understanding of the writing systems of the world. Beginning by exploring the spelling of English, including how it arose and how it works today, the book goes on to address over 60 major languages from around the globe and includes detailed descriptions and worked examples of writing systems which foreground the phonetics of these languages. Key areas covered include: the use of the Latin alphabet in and beyond Europe; writing systems of the eastern Mediterranean, Greek and its Cyrillic offshoot, Arabic and Hebrew; languages in south and south-east Asia, including Hindi, Tamil, Burmese and Thai, as well as in east Asia, including Chinese, Japanese and Korean; reflections on ancient languages such as Sumerian, Egyptian, Linear B and Mayan; a final chapter which sets out a typology of writing systems. All of the languages covered are contextualised by authentic illustrations, including road signs, personal names and tables, to demonstrate how theoretical research can be applied to the real world. Taking a unique geographical focus that guides the reader on a journey across time and continents, this book offers an engaging introduction for students approaching for the first time the phonetics of writing systems, their typology and the origins of scripts.

Books IV–VI Ludger Hovestadt, 2022-12-31 Abhandlung zur digitalen Architektur Hovestadts Traktat folgt strikt den Linien der bekannten Abhandlungen von Vitruv und Alberti, in der Annahme, dass wir uns heute wieder in einer ähnlichen Konstellation befinden. Vitruv und Alberti brachten zum Ausdruck, was Architektur in ihrer Epoche bedeutete: die römische Antike und die Renaissance. Hovestadt formuliert sie nun in den heutigen Begriffen der Physik, Mathematik, Technologie, Literatur und Philosophie neu. Die Bücher I bis III befassen sich mit der Rolle des Architekten und der Objektivität der Architektur. Die Bücher IV bis VI thematisieren die Modalitäten des Sprechens und der Kodierung von Architektur: das Geheime, das Öffentliche und das Private. Die Bücher VII bis X widmen sich den eigentlichen digitalen Mechanismen: künstlicher Intelligenz, natürlicher Kommunikation, Gnomonik und kulturellem Erbe. Ein Architekturtraktat unserer Zeit in 10 Büchern Nach dem Vorbild von Vitruv und Alberti Erscheint in drei Bänden der Reihe Applied Virtuality Book Series, Bd.

The Deja Vu Chronicles Billy Bradley,2014-09-19 What would you do if you knew what was going to happen? Would you use your knowledge of history to change it or would you stand by and allow it to occur. Even small actions could have massive consequences. Lives could be saved or destroyed; choices made could present the possibility that you may never have been born. When the most destructive war in history is about to start, there is no way of telling if your knowledge of it would help. The far reaching consequences provide for an excellent story telling vehicle where the war itself is also a character.

Atlas of Fantastic Infrastructures An Mihye,2016-04-25 The Atlas of Fantastic infrastructures deals with the characterization of architecture, media and digital infrastructure. In concrete terms, it deals with the materiality of buildings and the intangibility of data. While technical or functional studies often tend to flatten the multiplex phenomena, the author speculatively propose four abstract prisms: 1) AFFAIR WITH PHANTOMS - who do we want to meet in a digitally mediated space, and what kind of conversation/activity will we have?; 2) PARA-DESIRE - where do our surreal desires live, and what are their strategies?; 3) MEDIATED SPACE CATALOGUE - what kinds of data, information, things, spaces and places are

available in the world, and how our activities blend them?; 4) GIFTS OF THE GARDENS – how can an idea enter physical reality, and what are the pathways of such becomings? The author examines buildings and projects by Toyo Ito, Philippe Rahm, Olafur Eliasson, Greg Lynn, MVRDV, Electroland, Troika, NOX, Rafael Lozano-Hemmer and others.
